RESUMEN

Senior Process Engineer: Provide leadership and direction by conducting world class engineering in the area of process capability to enable the business and manufacturing sites to achieve the level of performance consistent with business plans and economic drivers. The aim is to design new or improved manufacturing capabilities, while optimizing the performance, quality, safety and costs and staying in compliance with applicable standards. Full time job. 10 years experience.

DESCRIPCIÓN DE LA EMPRESA

Our client is a leading global force in the specialty chemicals and materials sector. The company has pro forma annualized sales of approximately \$7.5 billion, more than 10,000 associates and 117 production facilities serving over 20,000 customers around the world. They are one of the world's largest specialty chemicals and materials companies, with operations located to serve all major regions of the world with a broad portfolio of specialty performance products for industrial and consumer markets. Their materials are found in virtually thousands of end-use products, and touch nearly every facet of modern living.
